Ohio Gov. Strickland Visits Jacobs Automation, a Hi-Tech Ohio Company

CINCINNATI, OH, Feb. 7, 2008 – Jacobs Automation hosted a visit by Ohio Governor Ted Strickland today. The highlight of the Governor’s visit was a demonstration of Jacobs’ patented PackTrak™ quick changeover technology.

Companies in the Consumer Product Goods industry are challenged with proliferating brand variations and reduced product lifecycles. PackTrak™ technology reduces the time to change over a production line, in some cases from hours to minutes. “This dramatic improvement can save companies millions of dollars per year”, says Keith Jacobs, President of Jacobs Automation.

PackTrak™ is a green technology that improves the energy efficiency of production machinery by eliminating chains, belts and gears that waste energy and consume petroleum-based lubricants. PackTrak™ also cuts down on landfill from waste product generated during lengthy changeovers adjustments.

About Jacobs Automation LLC

Jacobs Automation develops innovative automation technologies that dramatically increase the flexibility, speed and energy efficiency of production machinery. Founded by MIT graduate Keith Jacobs, the company is focused on delivering cost saving solutions to customers worldwide.
